Agentic AI

Duration: 3-6 Months | Mode: ONLINE | 100% Placement Support

Detailed Curriculum & Module Outline:

Module 1: From Prompts to Agents

What makes a system agentic, where a single model call stops being enough, and when not to use

Module 2: Agent Architectures

The reason-act loop, planning, reflection, and building one from scratch in plain Python

Module 3: Tool Use and Function Calling

Designing tools an agent can use correctly, schemas, validation and handling a tool that fails

Module 4: Memory and State

Short and long-term memory, context management, and keeping state across a long-running task

Module 5: LangChain Essentials

Chains, tools, agents and the abstractions worth using once you know what they replace

Module 6: Orchestration with LangGraph

Graph-based control flow, checkpoints, branching and human-in-the-loop approval steps

Module 7: Multi-Agent Workflows

Specialised agents, delegation and message passing, and the coordination costs that come with t

Module 8: Observability, Evaluation and Guardrails

Tracing runs, evaluating on real tasks, limiting scope, and controlling cost and runaway loops

Module 9: Capstone Agent Project

An agent that completes a genuine multi-step task, traced, evaluated and demonstrated end to en
