LeSuccess Academy

Learn . Educate . Succeed | Official Course Syllabus

MEAN Full Stack

Duration: 3-6 Months | Mode: HYBRID | 100% Placement Support

Detailed Curriculum & Module Outline:

Module 1: JavaScript Foundations

Types, scope, closures and ES6+ syntax - the base TypeScript and Angular are built on

Module 2: HTML5, CSS3 and Responsive Layout

Semantic markup, flexbox and grid, and templates that stay maintainable inside a component fram

Module 3: TypeScript Essentials

Types, interfaces, generics and decorators, and why an Angular codebase is unmanageable without

Module 4: Angular Fundamentals

Components, templates, data binding, directives and pipes, built around one application you kee

Module 5: Services, Dependency Injection and RxJS

Shared state, HTTP calls and observables - the part of Angular that decides whether the app sca

Module 6: Angular Routing and Forms

Route guards, lazy loading, reactive forms and validation that gives users a usable error messa

Module 7: Node.js Fundamentals

The runtime, modules, the event loop, npm and debugging server-side JavaScript

Module 8: Express and REST APIs

Routing, middleware, validation and status codes, exercised from Postman before the UI exists

Module 9: MongoDB and Mongoose

Schema design, relationships, indexes and aggregation against a realistic dataset

Module 10: Authentication and Security

JWT, guards, roles, password hashing and the common ways a web app leaks data

Module 11: Testing, Git and Deployment

Unit tests, branching, pull requests, Docker and getting the application onto a real host

Module 12: Capstone Project

A complete MEAN application built to a brief, reviewed and defended in a mock technical intervi
