Learn . Educate . Succeed | Official Course Syllabus

Cybersecurity

Duration: 3-6 Months | Mode: HYBRID | 100% Placement Support

Detailed Curriculum & Module Outline:

Module 1: Security Fundamentals

Confidentiality, integrity and availability, threat actors, risk, and the legal and ethical bou

Module 2: Networking and TCP/IP

The OSI model, addressing, routing, ports and protocols, read from real packet captures

Module 3: Linux Fundamentals for Security

The filesystem, permissions, users, processes, logs and the shell skills every tool assumes

Module 4: Cryptography Basics

Hashing, symmetric and asymmetric encryption, TLS and certificates, and how they are misused in

Module 5: System and Network Hardening

Patching, configuration baselines, firewalls, access control and reducing what an attacker can

Module 6: Traffic Analysis with Wireshark

Capturing and filtering traffic, following streams, and spotting what does not belong

Module 7: Reconnaissance and Scanning

Nmap, service enumeration and vulnerability scanning inside an authorised lab scope

Module 8: Web Application Security

The OWASP Top 10, tested hands-on with Burp Suite against deliberately vulnerable applications

Module 9: Ethical Hacking in the Lab

Kali Linux, exploitation of known-vulnerable targets, and documenting every step you took

Module 10: Threat Analysis and Incident Response

Log analysis, SIEM concepts, triage, containment and the report that follows an incident

Module 11: Compliance and Career Pathways

ISO 27001 and data protection basics, plus how certification tracks map to security roles
