Learn . Educate . Succeed | Official Course Syllabus

MERN Full Stack

Duration: 3-6 Months | Mode: HYBRID | 100% Placement Support

Detailed Curriculum & Module Outline:

Module 1: JavaScript Foundations

Types, scope, closures, arrays and objects, and the ES6+ syntax the rest of the stack assumes y

Module 2: HTML5, CSS3 and Responsive Layout

Semantic markup, flexbox and grid, rebuilding real pages to spec before any framework appears

Module 3: Asynchronous JavaScript

Promises, async/await, fetch and error handling - where most beginner bugs in this stack actual

Module 4: React Fundamentals

Components, props, state, hooks and lists, built around one application you extend all course

Module 5: React Router and State Management

Routing, context, and lifting state, plus when reaching for a state library is the wrong answer

Module 6: Node.js Fundamentals

The runtime, modules, the event loop, npm and reading a stack trace without guessing

Module 7: Express and REST APIs

Routing, middleware, validation, status codes and an API your own React app consumes

Module 8: MongoDB and Mongoose

Documents, schema design, relationships, indexes and aggregation - modelling data on purpose

Module 9: Authentication and Authorisation

Sessions, JWT, password hashing, roles, and the mistakes that leak user data

Module 10: Testing and Debugging

Postman, browser devtools and automated tests, used while you build rather than after

Module 11: Git, Docker and Deployment

Branching, pull requests, containers, environment variables and getting the app onto a real hos

Module 12: Capstone Project

A full MERN application, built to a brief, reviewed and defended the way an interview will ask
